Although articles reporting research studies are helpful in acquainting students with methodological approaches, they often make the process look so straightforward, clean, and effortless. It is rare to find an article that tells the "real" story behind the finished product. By having real researchers tell their own stories of "mucking around" with methodological and ethical issues in qualitative research, we get a more realistic, human story of the process. This is a collection of such stories. Authors were asked to describe their own experiences with methodological and ethical struggles as they engaged in their work. Each of the essays offers insight into the research approach used as well as particular issues which became apparent during the research process. Key issues raised by the authors include early learnings; gaining entry; overlapping, conflicting roles, and the boundaries of these roles; differential power relationships; who tells the story and whose story is told; ethical concerns related to confidentiality; and the influence of a researcher's particular philosophy or theoretical framework on his or her research. Throughout the book we see scholars whose personal stories or autobiographies intersect closely with their research projects. deMarrais introduces a unique framework to help students gain an overview of qualitative research methods and the underpinnings and processes in these approaches. This framework is centered on the ways we understand phenomena using qualitative research approaches that engage archival knowledge, narrative knowledge, or observational knowledge.

The philosophical foundation of emancipatory knowledge lies in critical theory. In this paradigm, instrumental and communicative knowledge are not rejected but are limited. If we do not question current scientific and social theories and accepted truths, we may never realize how we are constrained by their inevitable distortions and errors. Without the possibility of critical questioning of ourselves and our beliefs, such constraining knowledge can be accepted by entire cultures. The research paradigm that is relevant for constructing this kind of knowledge is the critical paradigm. Data are always qualitative and have specific methods of research. Quantitative research unquestionably has a place and is fundamental to scientific advances, but qualitative research delves into what it is to be human. Through qualitative research, we gain insight into communicative knowledge, its rich nature, and the mechanisms by which communicative knowledge is formed and interpreted. Qualitative research enables the necessary exploration and critical analysis of social systems and uncovers and facilitates critical reflections on the inevitable assumptions, which shape social behavior and interaction, thereby stimulating and empowering change. Promoting Qualitative Research Methods for Critical Reflection and Change provides readers with a comprehensive array of qualitative research methods, which can be implemented in a variety of contexts for a variety of purposes. The chapters explore the impact, uses, and methodologies for qualitative research across various fields of research. This book is ideal for practitioners, researchers, academicians, and students interested in the use of qualitative research methods.

This book discusses aspects of the theory and practice of qualitative research in the specific context of language and literacy education. It addresses epistemological perspectives, methodological problems, and practical considerations related to research involvements in areas of language education and literacy studies rather than generic issues of other fields of social sciences. The volume starts with Theoretical Considerations in the first part and raises some epistemological and theoretical concerns that are rarely debated in the specific context of research on language and literacy teaching. The second part, Methodological Approaches explores issues of the design and implementation of language and literacy education research within the framework of some of the major established qualitative research traditions. Finally, the part on Research in Action discusses practical aspects of a few actual instances of qualitative research on language and literacy education in different contexts.

This book focuses on a key issue in the methodology of the social and behavioural sciences: the mixing of different research methods. The extent to which qualitative and quantitative research differ from one another has long been a subject of debate. Although many methodologists have concluded that the two approaches are not mutually exclusive, there are few books on either the theory or the practice of mixing methods. Mixing Methods: Qualitative and Quantitative Research presents a comprehensive discussion of the theoretical, methodological and practical issues. It also covers a number of case studies of research which have successfully combined qualitative and quantitative approaches. Contributors include sociologists who have written extensively on the methodology of the social sciences and researchers who have concerned themselves with important social policy issues in the fields of further education, community services and household finances.

This book provides rare, insider accounts of the academic research process, revealing the human stories and lived experiences behind research projects; the joys and mistakes of a wide range of international researchers principally from the fields of accounting and finance, but also from related fields in management, economics and the social studies of science.

This unique collection on Research in Teaching and Learning explores particular research approaches and brings to the forefront challenges, questions, and considerations specific to the methods used and not just the disciplinary areas in which the research was conducted.

First Published in 1985. Routledge is an imprint of Taylor & Francis, an informa company.

A practitioner-researcher is an information professional who may not have formal training in using research methods and is learning how to use these methods during their busy, complex job. [This book] can help information professionals build an understanding of the research process as applied to our field and address the challenges of undertaking research as a practitioner, as well offer support and advice for all stages of a research project, from writing the proposal to collecting the data to disseminating the findings. --

Qualitative Inquiry at a Crossroads critically reflects on the ever-changing dynamics of qualitative research in the contemporary moment. We live at a crossroads in which the spaces for critical civic discourse are narrowing, in which traditional political ideologies are now questioned: there is no utopian vision on the horizon, only fear and doubt. The moral and ethical foundations of democracy are under assault, global inequality is on the rise, facts are derided as ' fake news ' —an uncertain future stands at our door. Premised on the belief that our troubled times call for a critical inquiry that matters—a discourse committed to a politics of resistance, a politics of possibility—leading international contributors from the United States, United Kingdom, Australia, Spain, Norway, and Denmark present a range of perspectives, challenges, and opportunities for the field. In so doing, they wrestle with questions concerning the intersecting vectors of method, politics, and praxis. More specifically, contributors engage with issues ranging from indigenous and decolonizing methods, arts-based research, and intersectionality to debates over the research marketplace, accountability metrics, and emergent forays into post-qualitative inquiry.
