This high-end Android phone is the first to be fully Google-branded. Key features include quad-HD 5.5-inch AMOLED display ideal for VR, Google Assistant software, top-end Snapdragon 821 processor ...

Conservation research in libraries is a rapidly growing field. This book places analysis within its context in conservation and provides examples of how this expensive resource can be used. Through a series of case studies, it describes major analytical procedures, including visualization, molecular, elemental and separation techniques as well as chemical tests. It is thus a suitable reference work for library conservators and curators. Please note: Despite careful production of our books, sometimes mistakes happen. Unfortunately, the authorship for some chapters wasn ' t correct in the original publication. Chapter 5 was written by Andrew Beeby and David Howell as co-author, chapter 6 by Kelly Domoney and David Howell as co-author, and chapter 9 is authored by Anita Quye. This will be corrected. We apologize for the mistake.

Updated handbook to explain the fundamental business, legal, and technical issue surrounding electromagnetic spectrum use today.

Printed in full color. Software development happens in your head. Not in an editor, IDE, or designtool. You're well educated on how to work with software and hardware, but what about wetware--our own brains? Learning new skills and new technology is critical to your career, and it's all in your head. In this book by Andy Hunt, you'll learn how our brains are wired, and how to take advantage of your brain's architecture. You'll learn new tricks and tipsto learn more, faster, and retain more of what you learn. You need a pragmatic approach to thinking and learning. You need to Refactor Your Wetware. Programmers have to learn constantly; not just the stereotypical new technologies, but also the problem domain of the application, the whims of the user community, the quirks of your teammates, the shifting sands of the industry, and the evolving characteristics of the project itself as it is built. We'll journey together through bits of cognitive and neuroscience, learning and behavioral theory. You'll see some surprising aspects of how our brains work, and how you can take advantage of the system to improve your own learning and thinking skills. In this book you'll learn how to: Use the Dreyfus Model of Skill Acquisition to become more expert Leverage the architecture of the brain to strengthen different thinking modes Avoid common "known bugs" in your mind Learn more deliberately and more effectively Manage knowledge more efficiently

1. The ninth International Summer School on Crystal Growth. ISSCG IX A complete theory of crystal growth establishes the full dependence of crystal size, shape and structure on external parameters like temperature, pressure, composition, purity, growth rate and stirring of the mother phase, implicitly establishing how the corresponding fields vary in space and time. Such a theory does not exist, however. Therefore equipment to grow crystals is developed on the basis of partial knowledge. Skill, experience and creativity still are of central importance for the success o- a crystal growth system. In this book we collected contributions from the teachers of the ninth International Summer School on Crystal Growth ISSCG IX, held 11-16 june 1995 at Papendal, the national sports centre of the Netherlands. These contributions were used during the lectures. The authors have tried to present their work in such a way that only basic physical knowledge is required to understand the papers. The book can be used as an introduction to various important sub disciplines of the science and technology of crystal growth. Since, however the information content considerably exceeds a lecture note level and touches the present limits of understanding, it is an up to date handbook as well.

This second edition volume presents a selection of cellular and molecular techniques that can be adapted to cover a range of applications and diseases. The book is divided into three sections: saliva and oral diseases, molecular biosciences, and cell and tissues. The first section contains chapters that discuss proteomic analyses by mass spectrometry and NMR-based metabolomics that can be used to not only study saliva, but also to assess other oral fluids such as gingival crevicular fluid. The second section contains chapters that profile oral microbial communities, quantitative real-time PCR, and adhesion of yeast and bacteria to oral surfaces. The third section deals with a range of approaches that enable the behavior of cells and tissues in both health and disease to be analyzed at the molecular level. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Cutting-edge and comprehensive. Oral Biology: Molecular Techniques and Applications, Second Edition is a useful resource for oral biologists at all levels (students, early career researchers, and experienced veterans), and it provides a ready reference to new techniques and approaches that can be used to answer numerous specific scientific questions that may lead to a deeper understanding and treatments of oral diseases.

This comprehensive book responds to the growing demand to study entrepreneurship as a key driver of innovation and competitive advantage. Challenging the existing idea that technological entrepreneurship exists predominantly in SMEs and as a result of market demands, the author argues that a commitment to entrepreneurship remains the most effective strategy for sustaining wealth generation for both organisations and entire nations. The aim of Technological Entrepreneurship is to provide the reader with additional knowledge and understanding of the concepts associated with the exploitation of technological entrepreneurship, and to demonstrate how associated management principles are somewhat different to those utilised in market-driven entrepreneurship. Validation of presented theoretical concepts is achieved through coverage of processes and practices utilised by real world organisations seeking to achieve maximum wealth generation, with specific emphasis on how technological entrepreneurship is the source of disruptive innovation within service sector organisations and how the philosophy is causing fundamental change in the provision of healthcare.
