Benny Lewis, who speaks over ten languages—all self-taught—runs the largest language-learning blog in the world, Fluent In 3 Months. Lewis is a full-time "language hacker," someone who devotes all of his time to finding better, faster, and more efficient ways to learn languages. Fluent in 3 Months: How Anyone at Any Age Can Learn to Speak Any Language from Anywhere in the World is a new blueprint for fast language learning. Lewis argues that you don't need a great memory or "the language gene" to learn a language quickly, and debunks a number of long-held beliefs, such as adults not being as good of language learners as children.

This book's innovative approach proposes Language for Teaching Purposes as a distinct field of enquiry and practice within Language for Specific Purposes. It uses robust theoretical and empirical evidence to demonstrate the specificity of language used by teachers teaching language, and the complex decisions teachers make around language choice and use in language classrooms. These complexities are shown to affect Non-native Speaker Language Teachers in particular so that their language needs must be met in teacher training programmes. Set in the Anglophone foreign language teaching world, this book will appeal to anyone involved in teacher training, language teaching or the investigation of classroom discourse.

This second edition of Historical Dictionary of Contemporary Germany contains a chronology, an introduction, appendixes, and an extensive bibliography. The dictionary section has over 500 cross-referenced entries on important personalities, politics, economy, foreign relations, religion, and culture.

It is largely accepted in the relevant literature that successful learning of one or more non-native languages is affected by a number of factors that are independent of the target language(s) per se: these factors include the age of acquisition (AoA) of the target language(s), the type and amount of formal instruction the learners have received, as well as the amount of language use that the learners demonstrate. Recent experimental evidence suggests that one crucial factor for efficient native-like performance in the non-native language is the amount of naturalistic exposure, or immersion, that the learners receive to that language. This can be broadly defined as the degree to which language learners use their non-native language outside the classroom and for their day-to-day activities, and usually presupposes that the learners live in an environment where their non-native language is exclusively or mostly used. Existing literature has suggested that linguistic immersion can be beneficial for lexical and semantic acquisition in a non-native language, as well as for non-native morphological and syntactic processing. More recent evidence has also suggested that naturalistic learning of a non-native language can also have an impact on the patterns of brain activity underlying language processing, as well as on the structure of brain regions that are involved, expressed as changes in the grey matter structure. This Research Topic brings together studies on the effects of learning and speaking a non-native language in a naturalistic environment. These include more efficient or "native-like" processing in behavioural tasks tapping on language (lexicon, morphology, syntax), as well as changes in the brain structure and function, as revealed by neuroimaging studies.

Bachelor Thesis from the year 2017 in the subject English Language and Literature Studies - Linguistics, grade: 2,0, University of Mannheim, language: English, abstract: In this thesis, the accuracy of the Common European Framework of Reference for Languages (CEFR) is explored with the help of a study investigating the German L2 morphosyntactic competence of 15 English L1 speakers in two settings: a language assessment test setting as well as in online processing. Within this thesis L2 morphosyntactic competence was limited to the two investigated areas of subject-verb-agreement (SVA) as well as the distinctive verb placement in German main and subordinate clauses. Previous research has identified these two linguistic areas as being especially prone to error in adult L2 acquisition of German. Since all test takers varied in their German language proficiency levels (encompassing a range from A2 to B2 according to the CEFR) it was hypothesised that L2 learners of a B2 language proficiency level generally outperform L2 learners of a lower language proficiency level (B1 and A2) in all investigated areas. However, this hypothesis could not be affirmed since the study did not find significant differences in the morphosyntactic competence of English German L2 learners between test takers of distinctive CEF language proficiency levels.

In today's increasingly globalized and mobile societies, internal and international migrants, refugees and asylum seekers represent a significant share of the population of cities and countries. This publication presents experiences from researchers and practitioners from a variety of geographical contexts on how they have been included and have participated in disaster prevention, preparedness, response and recovery activities. It aims to highlight the importance and benefits of, as well as options for, integrating migrants into decision-making, policy-setting and implementation of disaster risk reduction initiatives. This publication builds upon the knowledge and experiences gathered through the Migrants in Countries in Crisis (MICIC) Initiative, a global state-led process for which IOM has been serving as Secretariat, and the Council of Europe's EUR-OPA programme on "Migrants, asylum seekers and refugees in the context of major risks prevention and management".

Sag mal is the introductory German program you've been waiting for! This program's emphasis on contemporary culture, a thorough coverage of reading, speaking, and listening skills, and its integration of authentic video will guide your students from novice to conversant.

The Routledge Handbook of Plurilingual Language Education is the first comprehensive publication on plurilingualism, offering a multidimensional reflection on the nature, scope, and potential of plurilingualism in language education and society. Authored by a range of internationally recognized experts, the Handbook provides an overview of key perspectives on plurilingualism in a complementary range of fields. After a comprehensive introduction to the concept itself, 24 chapters are organized in six parts, each examining plurilingualism through a different lens. The Handbook spans historical, philosophical, and sociological dimensions, examines cognitive and neuroscientific implications, and the limitations of boundaries before moving to a pragmatic perspective: How is plurilingual language education developing in different contexts around the world? How can it contribute to language revitalization? How can it be expected to develop in education, digital spaces, and society as a whole? Written for an international audience, this handbook is an indispensable reference tool for scholars in education and applied linguistics, educators, graduate and post-graduate students, and policy makers.

100 dynamic and humorous lessons to learn German. With this method, only five months, you will be able to express yourself and talk in German. The recordings, made as always by professionals at a gradual pace, will help you feel perfectly comfortable with the language of Goethe

This is the first volume exclusively devoted to research methods in language policy and planning (LPP). Each chapter is written by a leading language policy expert and provides a how-to-guide to planning studies as well gathering and analyzing data Covers a broad range of methods, making it easily accessible to and useful for transdisciplinary researchers working with language policy in any capacity Will serve as both a foundational methods text for graduate students and novice researchers, and a useful methodological reference for experienced LPP researchers Includes a series of guidelines for public engagement to assist scholars as they endeavor to incorporate their work into the public policy process
