The Toll Group, which is selling its loss-making global express business to Allegro Funds, took a \$1.1 billion net loss in the year ending March 30, 2021.

" Shows how humans have brought us to the brink and how humanity can find solutions. I urge people to read with humility and the daring to act. " —Harpal Singh, former Chair, Save the Children, India, and former Vice Chair, Save the Children International In conversations with people all over the world, from government officials and business leaders to taxi drivers and schoolteachers, Blair Sheppard, global leader for strategy and leadership at PwC, discovered they all had surprisingly similar concerns. In this prescient and pragmatic book, he and his team sum up these concerns in what they call the ADAPT framework: Asymmetry of wealth; Disruption wrought by the unexpected and often problematic consequences of technology; Age disparities—stresses caused by very young or very old populations in developed and emerging countries; Polarization as a symptom of the breakdown in global and national consensus; and loss of Trust in the institutions that underpin and stabilize society. These concerns are in turn precipitating four crises: a crisis of prosperity, a crisis of technology, a crisis of institutional legitimacy, and a crisis of leadership. Sheppard and his team analyze the complex roots of these crises—but they also offer solutions, albeit often seemingly counterintuitive ones. For example, in an era of globalization, we need to place a much greater emphasis on developing self-sustaining local economies. And as technology permeates our lives, we need computer scientists and engineers conversant with sociology and psychology and poets who can code. The authors argue persuasively that we have only a decade to make headway on these problems. But if we tackle them now, thoughtfully, imaginatively, creatively, and energetically, in ten years we could be looking at a dawn instead of darkness.

The Global Innovation Index provides detailed metrics about the innovation performance of 127 countries and economies around the world. Its 81 indicators explore a broad vision of innovation, including political environment, education, infrastructure and business sophistication. This year ' s report reviews the state of innovation in agriculture and food systems across sectors and geographies. Chapters of the report provide more details on this year ' s theme from academic, business, and particular country perspectives from leading experts and decision makers.

A revolutionary new argument from eminent Yale Law professor Daniel Markovits attacking the false promise of meritocracy It is an axiom of American life that advantage should be earned through ability and effort. Even as the country divides itself at every turn, the meritocratic ideal – that social and economic rewards should follow achievement rather than breeding – reigns supreme. Both Democrats and Republicans insistently repeat meritocratic notions. Meritocracy cuts to the heart of who we are. It sustains the American dream. But what if, both up and down the social ladder, meritocracy is a sham? Today, meritocracy has become exactly what it was conceived to resist: a mechanism for the concentration and dynastic transmission of wealth and privilege across generations. Upward mobility has become a fantasy, and the embattled middle classes are now more likely to sink into the working poor than to rise into the professional elite. At the same time, meritocracy now ensnares even those who manage to claw their way to the top, requiring rich adults to work with crushing intensity, exploiting their expensive educations in order to extract a return. All this is not the result of deviations or retreats from meritocracy but rather stems directly from meritocracy ' s successes. This is the radical argument that Daniel Markovits prosecutes with rare force. Markovits is well placed to expose the sham of meritocracy. Having spent his life at elite universities, he knows from the inside the corrosive system we are trapped within. Markovits also knows that, if we understand that meritocratic inequality produces near-universal harm, we can cure it. When The Meritocracy Trap reveals the inner workings of the meritocratic machine, it also illuminates the first steps outward, towards a new world that might once again afford dignity and prosperity to the American people.

Recent global shifts in population have led to the fast urbanization of Africa. For Africa and the developing world, choosing the right policy strategies, processes, and tools are essential to turning urban centers into engines of industry and economic prosperity. Industrial and Urban Growth Policies at the Sub-National, National, and Global Levels is a pivotal reference source that examines current and evolving conditions of industrial and urban policies and their relationships around the world, especially between developed and developing economies. While highlighting topics such as the Fourth Industrial Revolution, urban policy, and global common good, this publication seeks to deepen and broaden the understanding of transformation in industrial development and responses to emerging urbanization processes. This book is ideally designed for industrial planners, entrepreneurs, urban development authorities, policymakers, academicians, researchers, and students.

We have long been told that corporations rule the world, their interests seemingly taking precedence over states and their citizens. Yet, while states, civil society, and international organizations are well drawn in terms of their institutions, ideologies, and functions, the world's global corporations are often more simply sketched as mechanisms of profit maximization. In this book, John Mikler re-casts global corporations as political actors with complex identities and strategies. Debunking the idea of global corporations as exclusively profit-driven entities, he shows how they seek not only to drive or modify the agendas of states but to govern in their own right. He also explains why we need to re-territorialize global corporations as political actors that reflect and project the political power of the states and regions from which they hail. We know the global corporations' names, we know where they are headquartered, and we know where they invest and operate. Economic processes are increasingly produced by the control they possess, the relationships they have, the leverage they employ, the strategic decisions they make, and the discourses they create to enhance acceptance of their interests. This book represents a call to study how they do so, rather than making assumptions based on theoretical abstractions.

What Globalization Now Means for Your Business Executives can no longer base their strategies on the assumption that globalization will continue to advance steadily. But how should they respond to the growing pressures against globalization? And what can businesses do to control their destinies in these times of uncertainty? In The New Global Road Map, Pankaj Ghemawat separates fact from fiction by giving readers a better understanding of the key trends affecting global business. He also explains how globalization levels around the world are changing, and where they are likely to go in the future. Using the most up-to-date data and analysis, Ghemawat dispels today's most dangerous myths and provides a clear view of the most critical issues facing policy makers in the years ahead. Building on this analysis, with examples from a diverse set of companies across industries and geographies, Ghemawat provides actionable frameworks and tools to help executives revise their strategies, restructure their global footprints, realign their organizations, and rethink how they work with local governments and institutions. In our era of rising nationalism and increased skepticism about globalization's benefits, The New Global Road Map delivers the definitive guide on how to compete profitably across borders.

This proactive guide brings the relationship between work life and mental well-being into sharp focus, surveying common challenges and outlining real-life solutions. The authors ' approach posits managers as the chief mental health officers of their teams, offering both a science-based framework for taking stock of their own impact on the workplace and strategies for improvement. Areas for promoting mental wellness include reducing stress and stigma, building a safe climate for talking about mental health issues, recognizing at-risk employees, and embracing diversity and neurodiversity. Emphasizing key questions to which managers should be attuned, the book speaks to its reader—whether in corporate, nonprofit, start-up, or non-business organizations—as a friendly and trusted mentor. Featured in the coverage: " Mind the mind how am I doing, and how can I do better? " Dare to care: how are my people doing, and how might I help? " Building blocks for mental health: how do I manage my team? " Stress about stressors: what is constantly changing in the environment? " Changing my organization and beyond: how can I have a greater impact? Compassionate Management of Mental Health in the Modern Workplace holds timely relevance for managers, human resources staff, chief medical officers, development heads in professional service firms, union or employee organization leaders, legal and financial professionals, and others in leadership and coaching positions. " Workplace mental health: Wow! A subject that frightens most managers. If they read this book, they will strengthen their own skills and transform their workplace and our society. " Donna E. Shalala, Trustee Professor of Political Science and Health Policy, University of Miami; former U.S. Secretary of Health and Human Services " Mental health is an underappreciated, and oft-misunderstood challenge that is growing in the modern workplace. This book provides leaders with practical advice to address mental health challenges in their organization and improve productivity and wellbeing. This is a topic that can no longer be ignored by leaders in any field, and a book that will fundamentally change the way we think about and help improve mental health in the workplace. " Dominic Barton, Managing Director, McKinsey & Company

How to close the gap between strategy and execution Two-thirds of executives say their organizations don ' t have the capabilities to support their strategy. In Strategy That Works, Paul Leinwand and Cesare Mainardi explain why. They identify conventional business practices that unintentionally create a gap between strategy and execution. And they show how some of the best companies in the world consistently leap ahead of their competitors. Based on new research, the authors reveal five practices for connecting strategy and execution used by highly successful enterprises such as IKEA, Natura, Danaher, Haier, and Lego. These companies: • Commit to what they do best instead of chasing multiple opportunities • Build their own unique winning capabilities instead of copying others • Put their culture to work instead of struggling to change it • Invest where it matters instead of going lean across the board • Shape the future instead of reacting to it Packed with tools you can use for building these five practices into your organization and supported by in-depth profiles of companies that are known for making their strategy work, this is your guide for reconnecting strategy to execution.

In 2015, the United Nations launched the Sustainable Development Goals (SDGs) to define and coordinate global priorities and aspirations up to 2030 in response to the economic, social and environmental challenges faced by the planet. Many governments across the world signed up to these goals. United Nations Secretary-General Ban Ki-Moon noted at the outset that business would be a vital partner in achieving the SDGs. This easy-to-digest book provides a critical evaluation of how a range of multinational companies from across different commercial sectors are currently addressing the SDGs and the challenges they are facing in contributing to them. The private sector has thus been set the challenge of responding positively in support of the SDGs whilst at the same time acting in the shorter-term interests of its stakeholders. Using a wealth of illustrative materials drawn from company reports and other sources, this book looks at the response of 80 companies and organisations from eight different industry sectors. It examines the different approaches taken, discusses how far the SDGs are actively supported and reviews how progress is being assessed against related targets and objectives. In addition to an analysis of each industry sector, the book provides a summary overview of all industry sectors studied, identifying the most and least supported SDGs overall. This book will be of interest to the fast-growing body of academics studying and researching sustainability, as well as to industry managers and public-sector operators involved in sustainability management and reporting. It provides detailed commentary and insights, and identifies both key themes from the research and critical issues for the successful implementation of the SDGs in the period up to 2030.

This textbook covers financial systems and services, particularly focusing on the present system and future developments. Broken into four parts, it briefly covers the history of financial markets to present day, discusses the future of financial markets, and ends with an overview of the law and regulatory components of this progressive system. The book incorporates extremely recent advances such as FinTech, blockchain, and artificial intelligence as applied to financial institutions and markets, and discusses trends likely to reshape the global financial system in the 21st century, including the rise of emerging countries (BRICS), the shift of economic power from the United States to Asia, and the likely new world financial order. It also explores these themes while discussing central banks and monetary policy, interest rates, inflation/deflation, financial markets and instruments, exchange rates, and FOREX. Lastly, it discusses the legal and regulatory framework of these advancements. Combining rigorous detail alongside exercises and PowerPoint slides for each chapter, this textbook helps finance students understand the wide breadth of financial systems and speculates the forthcoming developments in the industry.
