Hemispheric Dominance Inventory Test - Sarah Smith

First, a laterality index was calculated by comparing the number of acceptable late activity sources observed in the right and left hemispheric activation [LI= (RH - LH)/(RH + LH)], with a range from +1 to -1, with positive values indicating left hemispheric dominance and negative numbers indicating right hemispheric dominance. Index values between 0.1 and -0.1 were considered to be indicative of bilaterally symmetric activation.

Frontiers | Assessment of hemispheric dominance for ...

Following a Wada test, and just before removing an epileptic focus or a brain tumour, the neurosurgeon can determine the boundaries of the language areas more precisely by applying weak local electrical stimuli directly to the cortex and thus producing "brain maps" during the actual operation.
