Marina Security | Maritime Security | Taylor & Francis Group

Maritime security is an umbrella term informed to classify issues in the maritime domain that are often related to national security, marine environment, economic development, and human security. This includes the worlds oceans but also regional seas, territorial waters, rivers and ports. The theoretical concept of maritime security has evolved from a narrow perspective of national naval power projection towards a buzzword that incorporates many interconnected sub-fields. The definition of the t

The multidisciplinary Advanced Research Workshp (ARW) entitled "Human Systems Integration to Enhance Maritime Domain Awareness for Port/Harbour Security" brought together experts in the domains of Harbour/Port Security and Human Factors, as well as Knowledge Management, Knowledge Exploitation and Decision Support Technologies from the NATO, NATO Partner and Mediterranean Dialogue Countries, who presented and discussed various aspects of the problems of enhancing Maritime Domain Awareness in Harbours/Ports through application of Human-System Integration and advanced technologies. Presentations by domain, human factors and technology experts were devoted to enhance understanding of the problems, approaches, methodology and technical language used in various disciplines related to designing harbour security systems and integration of human factors in such systems. This volume comprises contributions by these lecturers and investigative reports by the working groups of the process, organizations and technology requirements to meet challenges of the seaport infrastructure security.

This user guide has been developed to consolidate existing IMO maritime security-related material into a companion guide to SOLAS chapter XI-2 and the ISPS Code so as to assist States in promoting maritime security through development of the requisite legal framework, associated administrative practices, procedures and the necessary material, technical and human resources. The intention is to assist SOLAS Contracting Governments in the implementation, verification, compliance with, and enforcement of, the provisions of SOLAS

chapter XI-2 and the ISPS Code.

The commercial maritime sector is highly vulnerable to theft and piracy, and presents a probable target for a major terrorist attack. The best way to prevent losses is to apply lessons learned in another arena—the struggle to curb drug smuggling. This effort has shown that successes can be achieved when effective and comprehensive security measures and procedures are implemented at key initial links in the cargo supply chain. The integrity and security of whole system are improved when efforts are focused at the primary "choke point" — the load seaports and their ships. This book provides practical, experience-based, and proven knowledge - and a "how-to-guide" - on maritime security. McNicholas explains in clear language how commercial seaports and vessels function; what threats currently exist; what security policies, procedures, systems, and measures must be implemented to mitigate these threats; and how to conduct ship and port security assessments and plans. Whether the problem is weapons of mass destruction or cargo theft, Maritime Security provides invaluable guidance for the professionals who protect our shipping and ports. Holds the keys to successfully designing, implementing, and managing effective port and vessel security programs in a high-risk environment Provides real-world experience in Maritime Security from the Managing Director of Phoenix Management Services Group in the USA and Panama. Offers specifics of a model port security program and case studies of effective tactics in a high-threat environment

Wessex Institute of Technology around the urgent need to determine solutions regarding sustainable development before our planet reaches a point of irreversibility. The aggressive search for new sources of energy and materials, the rapid rate at which natural resources are being consumed, and the destructiveness of the resulting pollution are all having a negative impact on the planet that needs to be stopped, if not reversed. As at the first two, participants at this conference will take stock of our situation and try to facilitate constructive principles and policies for a way forward, something that can only be done by transdisciplinary cooperation. Thus papers will examine ethical, political and social issues, health, safety and risk, lessons from nature, planning and development, and new technologies.

This book seeks to identify and address gaps in our understanding of maritime security and the role of small navies in Europe. The majority of Europe's navies are small, yet they are often called upon to address a complex array of traditional and non-traditional threats. This volume examines the role of small navies within the European security architecture, by discussing areas of commonality and difference between navies, and arguing that it is not possible to fully understand either maritime strategy or European security without taking into account the actions of small navies. It contains a number of case studies that provide an opportunity to explore how different European states view the current security environment and how naval policy has undergone significant changes within the lifetime of the existing naval assets. In addition, the book examines how maritime security and naval development in Europe might evolve, given that economic forecasts will likely limit the potential procurement of 'larger' naval assets in the future, which means that European states will increasingly have to do more with

less in the maritime domain. This book will be of much interest to students of maritime strategy, naval power, strategic studies, European politics and international relations in general.

An Advanced Research Workshop (ARW) "Data Fusion Technologies for Harbour Protection" was held in Tallinn, Estonia 27 June–1 July, 2005. This workshop was organized by request of the NATO Security Through Science Programme and the Defence Investment Division. An ARW is one of many types of funded group support mechanisms established by the NATO Science Committee to contribute to the critical assessment of existing knowledge on new important topics, to identify directions for future research, and to promote close working relationships between scientists from different countries and with different professional experiences. The NATO Science Committee was approved at a meeting of the Heads of Government of the Alliance in December 1957, subsequent to the 1956 recommendation of "Three Wise Men" – Foreign Ministers Lange (Norway), Martino (Italy) and Pearson (Canada) on Non-Military Cooperation in NATO. The NATO Science Committee established the NATO Science Programme in 1958 to encourage and support scientific collaboration between individual scientists and to foster scientific development in its member states. In 1999, following the end of the Cold War, the Science Programme was transformed so that support is now devoted to collaboration between Partner-country and NATO-country scientists or to contributing towards research support in Partner countries. Since 2004, the Science Programme was further modified to focus exclusively on NATO Priority Research Topics (i. e. Defence Against Terrorism or Countering Other Threats to Security) and also preferably on a Partner country priority area.

Intermodal Maritime Security: Supply Chain Risk Mitigation offers every stakeholder involved in international transactions the tools needed to assess the essential risks, threats and vulnerabilities within the global supply chain. The book examines the role intermodal maritime transportation plays in global security, surveying its critical policies, procedures, operations, infrastructure and systems. Linking new technological standards with intermodal operations, this book provides the foundational knowledge readers need, including transportation and maritime trade students, researchers, practitioners and regulatory agencies. Blends academic knowledge with real-world experiences Drawn from subject matter experts in academia, importers and exporters, transportation firms, and trade intermediaries Breadth of multidisciplinary coverage from maritime supply chains, port and maritime operations, as well as cyber and physical security

Port Cybersecurity: Securing Critical Information Infrastructures and Supply Chains examines a paradigm shift in the way ports assess cyber risks and vulnerabilities, as well as relevant risk management methodologies, by focusing on initiatives and efforts that attempt to deal with the risks and vulnerabilities of port Critical Information Infrastructures (CII) ecosystems. Modern commercial shipping ports are highly dependent on the operation of complex, dynamic ICT systems and ICT-based maritime supply chains, making these central points in the maritime supply chain vulnerable to cybersecurity threats. Identifies barriers and gaps in existing port
