In this paper, a low-profile silver ink printed antenna on flexible structure is presented. The designed antenna is printed on a flexible polyester fabric and fed by a standard 50- microstrip line with a microstrip-to-coplanar stripline (CPS) balun (unbalance-to-balance).The antenna has three directors for radiation enhancement.

A design of annular ring microstrip antenna with finite ground structure is proposed in this paper. The proposed geometry offers impedance bandwidth of 2.362 GHz and has stable radiation patterns for all resonant frequencies in the operational band. It is also found that shape and dimension of the finite ground plane is a key factor in ...
