A Guide to Kernel Exploitation: Attacking the Core discusses the theoretical techniques and approaches needed to develop reliable and effective kernel-level exploits, and applies them to different operating systems, namely, UNIX derivatives, Mac OS X, and Windows. Concepts and tactics are presented categorically so that even when a specifically detailed vulnerability has been patched, the foundational information provided will help hackers in writing a newer, better attack; or help pen testers, auditors, and the like develop a more concrete design and defensive structure. The book is organized into four parts. Part I introduces the kernel and sets out the theoretical basis on which to build the rest of the book. Part II focuses on different operating systems and describes exploits for them that target various bug classes. Part III on remote kernel exploitation analyzes the effects of the remote scenario and presents new techniques to target remote issues. It includes a step-by-step analysis of the development of a reliable, one-shot, remote exploit for a real vulnerability a bug affecting the SCTP subsystem found in the Linux kernel. Finally, Part IV wraps up the analysis on kernel exploitation and looks at what the future may hold. Covers a range of operating system families – UNIX derivatives, Mac OS X, Windows Details common scenarios such as generic memory corruption (stack overflow, heap overflow, etc.) issues, logical bugs and race conditions Delivers the reader from user-land exploitation to the world of kernel-land (OS) exploits/attacks, with a particular focus on the steps that lead to the creation of successful techniques, in order to give to the reader something more than just a set of tricks

Application of polymers from renewable resources - also identified as biopolymers - has a large potential market due to the current emphasis on sustainable technology. For optimal R&D achievements and hence benefits from these market opportunities, it is essential to combine the expertise available in the vast range of different disciplines in biopolymer science and technology. The International Centre of Biopolymer Technology - ICBT - has been created with support from the European Commission to facilitate co operation and the exchange of scientific knowledge between industries, universities and other research groups. One of the activities to reach these objectives, is the organisation of a conference on Biopolymer Technology. In September 1999, the first international conference on Biopolymer Technology was held in Coimbra, Portugal. Because of its

success - both scientifically and socially - and because of the many contacts that resulted in exchange missions or other ICBT activities, it was concluded that a second conference on Biopolymer Technology was justified. This second conference was held in Ischia, Italy in October 2000. And again, the scientific programme contained a broad spectrum of presentations in a range of fields such as biopolymer synthesis, modification, technology, applications, material testing and analytical methods.

While the role of monastic education has been studied in great detail in regard to male practices, this book examines the differences between the monastic formation and education of men and of women in Western Europe from the eighth to the sixteenth century. Fourteen chapters, written by well-known scholars, consider monastic education and practices in the geographical areas of England, France, Germany and the Low Countries. Using attitudes toward education and actual educational theories, the authors explore issues such as the use of music and physical training in education to explore new realms of the discipline.

The creation, implementation, and sustainability of new ideas is the lifeblood ensuring the growth and viability of any organization. Without continuing innovation, competitive advantage and global market share are endangered. Once-thriving organizations can find themselves unprepared for the future. A Passion for Ideas gathers together a stunning list of today's thought leaders to shed light on how "the new" is discovered. Via interviews and essays, an exciting and diverse international group of innovators-representing not only business, but also science and the arts-share their insights and help us to understand the process of creativity and construction and the methods to move organizations forward in an ever-changing climate.

A determined, (down on her luck,) mother caring for her handicapped son becomes entangled in a murderous conspiracy to keep a twenty year old secret buried in this blistering thriller, set during the tragic aftermath of Hurricane Sandy, from Andrew Gross, the New York Times bestselling author of 15 Seconds and No Way Back. While driving along a suburban back road, Hilary Blum, who's just lost her job and whose deadbeat husband has left her alone to care for her son with Asperger's, witnesses a freakish accident. A car ahead of her careens

down a hill and slams into a tree. Stopping to help, she discovers the driver dead—and a satchel stuffed with a half a million dollars. That money could prevent her family's ruin and keep her special needs son in school. In an instant, this honest, achieving woman who has always done the responsible thing makes a decision that puts her in the center of maelstrom of dark consequences and life-threatening recriminations—a terrifying scheme involving a twenty-year-old murder, an old woman who's life has been washed out to sea, and a powerful figure bent to keep the secret that can destroy him hidden. With everything to lose, everything she loves, Hilary connects to a determined cop from Staten Island, reeling from the disaster of Sandy, to bring down an enemy who will stop at nothing to keep what that money was meant to silence, still buried.

In this guide for clinicians, patients, and self-helpers, CS Tapu presents the features of relational therapy from a practical perspective. This concise volume is a step-by-step guide that can allow a proper course to relation change. "Do you remember? At first, you couldn't refrain telling me that you didn't like me. As I pointed out repeatedly that telling me this means breaking the rules, you gave up. Then, I began feeling hostility from your part. But it was a healthy hostility, I felt it from the way you looked at me and the way you talked to me, not from what you did or what you said. As our therapy progressed, and I encouraged you to tell me openly what you thought about me, I felt that hostility fading away. One day you said: 'I think you're not a good therapist and I consider quitting the therapy'. From that moment on, you became more focused on what should we do for me to be a better therapist for you, and I spent less time being distressed about your feelings for me."
