*Oncogenes, Aneuploidy and AIDS* has other global themes such as how science should be done, and the prominent role of metaphoric language in popular and professional scientific writing. Bialy's method is to examine the most important review articles and scientific papers in both cancer and AIDS that Duesberg published between 1983 and 2003, and the responses to them in the journals.

*Oncogenes, Aneuploidy and AIDS: A Book Review* By RFD Columnist, David Crowe "Oncogenes, Aneuploidy and AIDS" seems like a strange title for a biography of AIDS gadfly Peter Duesberg. [Bialy, 2004] But then, as the rest of the title makes clear, it is a biography only of his scientific life, it spends barely any time discussing his childhood and formative years.

This book, *Oncogenes, Aneuploidy, and AIDS* is a beautifully written story. It is so astute and so sharp, so incisive. My God, this guy can write. But it is almost laughably non-scientific. I found it sad as a lay person who believes in the aspirations of science to remake the world in the image of nature.

According to author Harvey Bialy, the work of molecular biologist Peter Duesberg has been grossly distorted by the media and scientific establishments. Until recently, the scientific community—and most notably, those from the National Institute for Health—have been unwilling to look at his provocative theories of different causes for cancer and HIV/AIDS. Inspired by UC Berkeley's rare creation of an archive for Duesberg's papers, this book explores Duesberg's early groundbreaking work with viruses and oncogenes, his contentious fights with other scientists, and the profound influence of his life's work.

"A former HIV researcher tells the story of her disillusionment with the HIV/AIDS hypothesis and exposes not only its numerous flaws but also problems with the scientific research establishment that enabled this hypothesis to take such a strong, hypnotic

A collection of 13 articles originally published in scientific journals between 1987 and 1995, that call into question the dogma of Infectious AIDS.

Paralleling the discovery of HIV and the rise of the AIDS pandemic, a flock of naysayers has dedicated itself to replacing genuine knowledge with destructive misinformation—and spreading from the fringe to the mainstream media and the think tank. Now from the editor of the journal *AIDS and Behavior* comes a bold exposé of the scientific and sociopolitical forces involved in this toxic evasion. *Denying AIDS* traces the origins of AIDS dissidents' disclaimers during the earliest days of the epidemic and delves into the psychology and politics of the current denial movement in its various incarnations. Seth Kalichman focuses not on the "difficult" or doubting patient, but on organized, widespread forms of denial (including the idea that HIV itself is a myth and HIV treatments are poison) and the junk science, faulty logic, conspiracy theories, and larger forces of homophobia and racism that fuel them. The malignant results of AIDS denial can be seen in those individuals who refuse to be tested, ignore their diagnoses, or reject the treatments that could save their lives. Instead of ignoring these currents, asserts Kalichman, science has a duty to counter them. Among the topics covered: Why AIDS denialism endures, and why science must understand it. Pioneer virus HIV researcher Peter Duesberg's role in AIDS denialism. Flawed immunological, virological, and pharmacological pseudoscience studies that are central to texts of denialism. The social conservative agenda and the politics of AIDS denial, from the courts to the White House. The impact of HIV misinformation on public health in South Africa. Fighting fiction with reality: anti-denialism and the scientific community. For anyone affected by, interested in, or working with researchers in HIV/AIDS, and public health professionals in general, the insight and vision of *Denying AIDS* will inspire outrage, discussion, and ultimately action. Alice Keppel, the married lover of Queen Victoria's eldest son and great-grandmother to Camilla Parker-Bowles, was a key figure in Edwardian society. Hers was the acceptable face of adultery. Discretion was her hallmark. It was her art to be the king's mistress and yet to laud the Royal Family and the institution of marriage. Formidable and manipulative, her attentions to the king brought her wealth, power, and status. Her daughter Violet Trefusis had a long tempestuous affair with the author and aristocrat Vita Sackville-West, during which Vita left her husband and two sons to travel abroad with Violet. It was a liaison that threatened the fabric of Violet's social world, and her passion and recalcitrance in pursuit of it pitted her against her mother and society. From memoirs, diaries, and letters, Diana Souhami portrays this fascinating and intense mother/daughter relationship in *Mrs. Keppel and Her Daughter*. Her story of these women, their lovers, and their lovers' mothers, highlights Edwardian - and contemporary - duplicity and double standards and goes to the heart of questions about sexual freedoms.

This book explains how issues of governance lie at the heart of understanding and combating the HIV/AIDS crisis in Africa. It reviews the debates surrounding the root causes of the pandemic and its continuing proliferation and examines the local and global socio-political forces that have contributed to the spread and impact of the disease.

The nature of scientific activity has changed dramatically over the last half century, and the objectivity and rigorous search for evidence that once defined it are being abandoned. Increasingly, this text argues, dogma has taken the place of authentic science. This study examines how conflicts of interest—both institutional and individual—have become pervasive in the science world, and also explores the troubling state of research funding and flaws of the peer-review process. It looks in depth at the dominance of several specific theories, including the Big Bang cosmology, human-caused global warming, HIV as a cause of AIDS, and the efficacy of anti-depressant drugs. In a scientific environment where distinguished experts who hold contrary views are shunned, this book is an important contribution to the examination of scientific heterodoxies.

The groundbreaking exploration of the power of empathy by renowned child-psychiatrist Bruce D. Perry, co-author, with Oprah Winfrey, of *What Happened to You? Born for Love* reveals how and why the brain learns to bond with others—and is a stirring call to protect our children from new threats to their capacity to love. “Empathy, and the ties that bind people into relationships, are key elements of happiness. *Born for Love* is truly fascinating.” — Gretchen Rubin, author of *The Happiness Project* From birth, when babies' fingers instinctively cling to those of adults, their bodies and brains seek an intimate connection, a bond made possible by empathy—the ability to love and to share the feelings of others. In this provocative book, psychiatrist Bruce D. Perry and award-winning science journalist Maia Szalavitz interweave research and stories from Perry's practice with cutting-edge scientific studies and historical examples to explain how empathy develops, why it is essential for our development into healthy adults, and how to raise kids with empathy while navigating threats from technological change and other forces in the modern world. Perry and Szalavitz show that compassion underlies the qualities that make society work—trust, altruism, collaboration, love, charity—and how difficulties related to empathy are key factors in social problems such as war, crime, racism, and mental illness. Even physical health, from infectious diseases to heart attacks, is deeply affected by our human connections to one another. As *Born for Love* reveals, recent changes in technology, child-rearing practices, education, and lifestyles are starting to rob children of necessary human contact and deep relationships—the essential foundation for empathy and a caring, healthy society. Sounding an important warning bell, *Born for Love* offers practical ideas for combating the negative influences of modern life and fostering positive social change to benefit us all.
