Reading Across the Disciplines offers a collection of twelve essays detailing a range of approaches to dealing with students' reading needs at the college level. Transforming reading in higher education requires more than individual faculty members working on SoTL projects in their particular fields. Teachers need to consider reading across the disciplines. In this collection, authors from Australia and North America, teaching in a variety of disciplines, explore reading in undergraduate courses, doctoral seminars, and faculty development activities. By paying attention to the particular classroom and placing those observations in conversation with scholarly literature, they create new knowledge about reading in higher education from disciplinary and cross-disciplinary perspectives. Reading Across the Disciplines demonstrates how existing research about reading can be applied to specific classroom contexts, offering models for faculty members whose own research interests may lie elsewhere but who believe in the importance of reading.

Now in its fifth edition, this popular textbook is still the most comprehensive resource available on the oversight of literacy programs (PreK-12). Focusing on what literacy leaders need to know and do to meet today's mandates, experts in the field offer new insights that reflect the nation's changing policies related to the new Common Core State Standards for English Language Arts and Literacy in History/Social Studies, Science, and Technical Subjects. It also addresses forthcoming assessments aligned to the common core standards, and new mandates for evaluating teachers and principals. Literacy luminaries provide specific guidelines for all levels of instruction, including selecting and using materials and new technologies, promoting writing, assessing students, evaluating teachers, providing professional development, working with linguistically diverse and struggling learners, working with parents and the community, and evaluating school-wide literacy programs.

Crafting a well-written academic paper is often a challenge for college and university students. With this updated edition of *Designs for Disciplines*, students will learn the ins and outs of academic writing and develop the skills necessary for producing sophisticated research papers across a wide range of subject areas. The second edition of *Designs for Disciplines* takes an innovative approach to scholarly writing through its grounding in genre theory, which establishes the importance of context to effective communication. The authors introduce students to the many rhetorical features of academic writing and cover an array of topics including research, documentation, the articulation of a topic, and the drafting of a proposal, while also providing an in-depth examination of how to write strong introductions, core paragraphs, and conclusions. New to this edition is an expanded discussion on plagiarism, suggestions for compiling a research notebook, and many new examples drawn from both student papers and published articles. The text also follows the progress of a first-year student as she drafts and completes her research paper while receiving feedback from instructors. These rich pedagogical features and clear step-by-step instructions make this book an ideal resource for students to strengthen their academic writing skills.

Content Area Literacy introduces teachers to the reasons for and means of promoting basic and higher-order literacy across the disciplines. The fifth edition has been updated to reflect new research, methods, data, and national trends relative to the field. It includes new aids that offer guidelines for reading actively, highlighting important material, and making personal marginal notes. Key standards are also integrated throughout the methods chapters and an appendix of the Standards of 6-8 major Professional Associations has been added. Teachers will gain a strong understanding of practical and user-friendly methods.

learners. To do so, the authors present the six-phase Planning Elementary Digitally-Supported Literacy (PEDDL) Framework, along with four core practices useful for considering elementary disciplinary literacy. After grounding disciplinary literacy in elementary grades, how it might support all learners, and the rationale for its inclusion in K-5 instruction, core practices are presented, along with a rationale behind those practices. Then, the authors provide an in-depth overview of the PEDDL Framework with examples and research-based underpinnings of each phase. Finally, a paired chapter approach then guides readers through each of the four core disciplines to first overview practices particular to each discipline that are appropriate for elementary grades and then provide detailed lesson planning approaches using the PEDDL Framework for each. Supplementary lesson plan examples are also offered in this book for extended consideration of digitally-supported disciplinary literacy across K-5"--

This book will help educators rethink their expectations of and practices for developing the literacy skills of Black boys in the elementary school classroom. Tatum shows educators how to bring students' literacy development into greater focus by creating an early intellectual infrastructure of advanced literacy, knowledge, and personal development. He provides a strong conceptual frame, with associated instructional and curricular practices, designed to move Black boys from across the economic spectrum toward advanced literacy that aligns with the Black intellectual tradition. Readers will learn how to use texts from a broad range of potential professions, across academic disciplines, to nurture social and scientific consciousness. The text includes guidance for selecting texts, reading supports, prompts for analysis, and examples of student work. Teaching Black Boys in the Elementary Grades counters the current obsession with basic and proficient reading and argues for adopting an exponential growth model of literacy development. Book Features: A multidimensional model that supports reading and writing development. Student writing artifacts that can be used as a model for teachers. Sample lessons with texts for use across the academic disciplines. A strong conceptual and curricular frame to support educators in their text selection.

This brief version of the best-selling cross-curricular classic retains its hallmark coverage of source-based writing skills combined with five popular readings chapters. This portable version represents a carefully-chosen selection from the original edition, with five (of the original seven) readings chapters included in their entirety. The abbreviated rhetoric section still covers the skills of summary, critique, and synthesis, taking students step-by-step through the process of writing papers based on source material. Students then put these skills to practice on thematically-linked essays on provocative topics in the discipline-specific readings chapters. A stronger focus on argumentation addresses the trend found in today's composition classrooms. Individuals interested in writing from sources and academic writing in different disciplines.
