refconhvac.com

These systems are critically charged and require correct airflow and accurate test instruments to properly and accurately charge the system. An R410a and R22 charging calculator or the "Non TXV Charging Guide" are required to determine the target

Acces PDF

Refrigerant

total superheat.

Because these systems do not "control superheat" it is critical that the airflow be as close to possible to correct prior to charging as the system will be charged to the airflow.
