and social well-being. Furthermore, these benefits are evident across a diversity of ages, groups and populations. The need for these benefits in current societies means that exercise practitioners, professional bodies, institutions, health authorities and governments require high quality evidence to establish appropriate exercise guidelines, implementation strategies and effective exercise prescription at individual, group and population levels. Research Methods in Physical Activity and Health is the first book to comprehensively present the issues associated with physical activity and health research and outline methods available along with considerations of the issues associated with these methods and working with particular groups. The book outlines the historical and scientific context of physical activity and health research before working through the full

essential reading for undergraduate and Masters students carrying out a qualitative research project in sport and physical activity and for PhD students looking to refresh their knowledge.

Qualitative forms of inquiry are a dynamic and exciting area within contemporary research in sport, exercise and health.

Students and researchers at all levels are now expected to understand qualitative approaches and be able to employ them in their work. In this comprehensive and in-depth introductory text, Andrew C.

Sparkes and Brett Smith take the reader on a journey through the entire qualitative research process that begins with the conceptualization of ideas and the planning of a study, moves through the phases of data collection and analysis, and then explains how findings might be represented in various ways to different

audiences. Ethical issues are also explored in detail, as well as the ways that the goodness of qualitative research might be judged by its consumers. The book is based on the view that researchers need to make principled, informed and strategic decisions about what, why, when, and how to use qualitative forms of inquiry. The nature of qualitative research is explained in terms of both its core assumptions and what practitioners actually do in the field when they collect data and subject it to analysis. Each chapter is vividly illustrated with cases and examples from published research, to demonstrate different qualitative approaches in action and their relative strengths and weaknesses. The book also extends the boundaries of qualitative research by exploring innovative contemporary methodologies and novel ways to report research findings. Qualitative Research Methods in

Sport, Exercise and Health is essential reading for any student, researcher or professional who wishes to understand this form of inquiry and to engage in a research project within a sport, exercise or health context.

This text describes the associations between physical activity and major diseases. It emphasises the methods underpinning studies that can be conducted to elucidate these associations.

Researching Difference in Sport and Physical Activity goes beyond the content of introductory research methods texts to provide an insight into the methodological hurdles that are experienced when researching 'difference' in Sport and Physical Activity. Contributors reflect upon how the rhetoric of research methodology transfers into the reality of

Presenting case studies of real research projects, the book covers a range of topics, such as: disability in sport and physical activity vulnerable children in sport and physical activity visual research tools when working with children in a primary school setting physical activity, sedentary behaviour and obesity through childhood diverse ethnic groups in sport and physical activity settings. Each chapter contends with practical issues of power and representation within the research process, to recognise how a researcher–participant relationship that considers those who are ‘othered’ serves to change the dynamics and processes of research. This is an important resource for students of all sports related subjects and essential reading for anyone interested in the study of marginalised populations in sport and physical activity.
