Principles of Corporate Finance is the worldwide leading text that describes the theory and practice of corporate finance. Throughout the book, the authors show how managers use financial theory to solve practical problems and as a way to respond to change by showing not just how, but why companies and management act as they do. This text is a valued reference for thousands of practicing financial managers.

Fundamentals of Corporate Finance was designed and developed for a first course in business or corporate finance, for both finance majors and non-majors alike. The text is nearly self-contained in terms of background or prerequisites, assuming some familiarity with basic algebra and accounting concepts, while still reviewing important accounting principles very early on. The organization of this text has been developed to give instructors the flexibility they need. The best-selling text has three basic themes that are the central focus of the book: 1) An emphasis on intuition: the authors separate and explain the principles at work on a common sense, intuitive level before launching into any specifics. 2) A unified valuation approach: net present value (NPV) is treated as the basic concept underlying corporate finance. 3) A managerial focus: the authors emphasize the role of the financial manager as a decision maker, and they stress the need for managerial input and judgment.

This essential companion to the text provides detailed, accuracy-verified, class-tested solutions to every chapter problem. All the solutions, like the problems themselves, were written by the textbook authors. Scrutiny by Timothy Sullivan, Bentley University, and Mark Simonson, Arizona State University, guarantees unparalleled quality. Spreadsheet solutions to select chapter problems and Data Cases are available on the Instructor's Resource CD-ROM.

The Solutions Manual, prepared by Bruce Swensen of Adelphi University, contains solutions to all end of chapter problems for easy reference.
