Adaptive challenges are personal and political The book presents a new perspective, where climate change is viewed as a new type of adaptation challenge for humanity, or what Heifetz et al. (2009) refer to as an « adaptive challenge » – a challenge that draws attention to mind-sets, and the assumptions that underpin attitudes on change itself. Adaptive challenges are both personal and political.

*This book presents a new perspective on adaptation to climate change. It considers climate change as more than a problem that can be addressed solely through technical expertise. Instead, it approaches climate change as an adaptive challenge that is fundamentally linked to beliefs, values and worldviews, as well as to power, politics, identities and interests. Drawing on case studies from high-income countries, the book argues that it is time to consider adaptation to climate change as a challenge of social, personal and political transformations. The authors represent a variety of fields and perspectives, illustrating the importance of interdisciplinary approaches to the problem. The book will be of interest to researchers, policy makers and advanced students in the environmental sciences, social sciences and humanities, as well as to decision makers and practitioners interested in new ideas about adapting to climate change --

This book presents a new perspective on climate change for researchers and policy makers in environmental social sciences and humanities.

Strategic leadership techniques are the cornerstone to positive growth and prosperity within businesses and organizations. Implementing new management strategies and practices helps to ensure managers are optimizing their resources and driving innovation. The Encyclopedia of Strategic Leadership and Management investigates emergent administrative techniques and business practices being utilized within corporate and educational settings. Highlighting empirical research and best practices within the field, this encyclopedia will be an authoritative reference source for students, researchers, faculty, librarians, managers, and leaders across various disciplines and cultures.

As climate change adaptation rises up the international policy agenda, matched by increasing funds and frameworks for action, there are mounting questions over how to ensure the needs of vulnerable people on the ground are met. Community-based adaptation (CBA) is one growing proposal that argues for tailored support at the local level to enable vulnerable people to identify and implement appropriate community-based responses to climate change themselves. Community Based Adaptation to Climate Change: Scaling it up explores the challenges for meeting the scale of the adaptation challenge through CBA. It asks the fundamental questions: How can we draw replicable lessons to move from place-based projects towards more programmatic adaptation planning? How does CBA fit with larger scale adaptation policy and programmes? How are CBA interventions situated within the institutions that enable or undermine adaptive capacity? Combining the research and experience of prominent adaptation and development theorists and practitioners, this book presents cutting edge knowledge that moves the debate on CBA forward towards effective, appropriate, and ' scaled-up ' adaptive action.

The book presents detailed case studies examining the Rh ô ne Basin in the Canton Valais, Switzerland and the Aconcagua Basin in Valparaiso, Chile. In order to understand and assess the interplay of complex and interlinked environmental and socio-economic issues, the author looks beyond the technology, modelling, engineering and infrastructure associated with water resources management and climate change adaptation, to assess the decision-making environment within which water and adaptation policy and practices are devised and executed.

Based on papers presented at a workshop entitled Enhancing the Capacity of Developing Countries to Adapt to Climate Change, which was held Sept. 30-Oct. 2, 2001, Potsdam, Ger., and sponsored by the Postdam Institute for Climate Impact Research.

This book presents conceptual and empirical discussions of adaptation to climate change/variability in West Africa. Highlighting different countries ' experiences in adaptation by different socio-economic groups and efforts at building their adaptive capacity, it offers readers a holistic understanding of adaptation on the basis of contextual and generic sources of adaptive capacity. Focusing on adaptation to climate change/variability is critical because the developmental challenges West Africa faces are increasingly intertwined with its climate history. Today, climate change is a major developmental issue for agrarian rural communities with high percentages of the population earning a living directly or indirectly from the natural environment. This makes them highly vulnerable to climate-driven ecological change, in addition to threats in the broader political economic context. It is imperative that rural people adapt to climate change, but their ability to successfully do so may be limited by competing risks and vulnerabilities. As such, elucidating those vulnerabilities and sources of strength with regard to the adaptive capacities needed to support successful adaptation and avoid maladaptation is critical for future policy formulation. Though the empirical discussion is geographically based on West Africa, its applicability in terms of the processes, structures, needs, strategies, and recommendations for policy transcends the region and provides useful lessons for understanding adaptation broadly in the developing world.

The William and Flora Hewlett Foundation, understanding the need for policy makers at the national level to entrain the behavioral and social sciences in addressing the challenges of global climate change, called on the National Research Council to organize two workshops to showcase some of the decision-relevant contributions that these sciences have already made and can advance with future efforts. The workshops focused on two broad areas: (1) mitigation (behavioral elements of a strategy to reduce the net future human influence on climate) and (2) adaptation (behavioral and social determinants of societal capacity to minimize the damage from climate changes that are not avoided). Facilitating Climate Change Responses documents the information presented in the workshop presentations and discussions. This material illustrates some of the ways the behavioral and social sciences can contribute to the new era of climate research.

Climate change is one of the most complex challenges facing our planet and species. The sheer number of challenges it creates to can be overwhelming. The communication about issues caused by climate change is often too complex or too general to be understood by people in a meaningful way. This project addresses these issues by creating adaptive approaches to communicating such climate challenges through the use of accessible and provocative graphic design. The graphics are made accessible by focusing on localized issues. The graphics are informed and influenced by climate science, global warming literature, qualitative interviews with designers, and a survey of existing climate change focused graphic design. The project utilizes action research and iterative design methods. Along with this research, the interviews with practicing graphic designers shaped the scope of the project to be more specific and focused on Minnesota climate issues. The graphics were reviewed and refined through several iterations, which resulted in a poster series that helps bridge the gap between graphic design and climate science. Through dissemination at a public gallery exhibition the graphics received positive feedback and comments. Understanding climate change can be made easier by communicating relevant issues through the use of provocative graphics.

Climate Change is fast becoming a serious socio-economic challenge that has developmental implications. A nation's ability to proactively address such challenges places them in an economically advantageous position. In-depth exploration and analysis of such cases provide an insight into the adaptive capacity of society and the noble truth found through anthropological investigation. As you read the aim is to aid your own understanding of Climate Change Adaptation with a view to inspiring responsiveness to challenges brought on by Climate Change.
