UFAD guide : design, construction, and operation of underfloor air distribution systems. The use of underfloor air distribution (UFAD) is increasing in North America as a solution to space conditioning concerns. This design guide provides assistance in the planning, construction, and operation of UFAD systems, while carefully detailing the major differences between UFAD and more traditional forms of space conditioning.

UFAD guide : design, construction, and operation of ...

A comprehensive design guide that is accessible to the design and engineering community was needed to support the continued development and growth of this promising technology. This project developed the first ASHRAE Design Guide on UFAD and TAC technology and made it available to the professional design and engineering community at large.

Underfloor Air Distribution (UFAD) Design Guidance

The development of this design guide on underfloor air distribution (UFAD) is the result of a cooperative research agreement between the American Society of Heating, Refrigerating and Air-Conditioning Engineers, Inc. (ASHRAE), and the Center for the Built Environment (CBE) at the University of California, Berkeley, for ASHRAE Research Project RP-1064.

Underfloor Air Distribution (UFAD) Design Guide

In the past, engineers have designed UFAD ductwork based on their experience with overhead ducting. Overhead duct systems can create objectionable noise at duct velocities above 1500ft/min. Further, overhead ducts are installed in a ceiling plenum where 24, 36, 54 inch widths are not a big issue.
