Design For Six

Design for Six Sigma is an Engineering design process, business process management method related to traditional Six Sigma. It is used in many industries, like finance, marketing, basic engineering, process industries, waste management, and electronics. It is based on the use of statistical tools like linear regression and enables empirical research

though, when no improvement will enable an existing process to meet customer expectations.

Design For Six Sigma (DFSS)
Design For Six Sigma (DFSS) is a methodology using the Six Sigma principles in the design of products and their manufacturing support processes. DFSS helps businesses design products, processes and services. Design teams can use DFSS to develop safe, reliable and competitive products faster and more efficiently.

One popular Design for Six Sigma methodology is called DMADV, and retains the same number of letters, number of phases, and general feel as the DMAIC acronym. It rolls off the tongue (duh-mad-vee) in the same fashion as DMAIC (duh-may-ick). The five phases of DMADV are defined as: Define, Measure, Analyze, Design and Verify.

Design For Six Sigma (DFSS) Versus DMAIC

Design for Six Sigma (DFSS) helps organizations create new products, services and processes in a way that ensures customer satisfaction by using a structured phase framework
