A concept that has been much used in educational discourse, deriving from the work of Lev Vygotsky *, is the Z.P.D.: the Zone of proximal development. As with the related term 'scaffolding', often the usage is somewhat vague. Here is an attempt to offer an overview. "The 'zone' is not an actual physical space but an activity space – a 'space' relating to behaviours or competencies (or potential problems)" (Taber, 2018: 8).

The zone of proximal development – Science-Education-Research

The zone of proximal development (ZPD) is the range of abilities that an individual can perform with assistance but cannot yet perform independently. These skills are called "proximal" because the individual is close to mastering them but needs more guidance and practice in order to perform these actions independently. Vygotsky's Definition of ZPD

What Is the Zone of Proximal Development?

The zone of proximal development (ZPD) (zona blizhaishego razvitiia, in original Russian), is best understood as the zone of the closest, most immediate psychological development of learners that includes a wide range of their emotional, cognitive, and volitional psychological processes. In contemporary educational research and practice, though, it is often interpreted as the distance between what a learner can do without help, and what they can do with support from someone with more ...

Zone of proximal development - Wikipedia

The zone of proximal development is the difference between a child's current level of competence (unaided) and their potential level of competence if supported by an adult or by a more expert child. It's the difference between what they can do now and what they would be able to do with a little assistance.

Teaching in the zone of proximal development is important because so many times, children are presented with material that is either way too challenging (and they get frustrated) or way too easy (and they lose interest). In either case, no real learning is taking place. Teaching in the zone of proximal development means that the teacher (a parent is a teacher too) is presenting material that is just challenging enough so that it is interesting, engaging, and only requires the teacher/parent ...

Vygotsky scaffolding is part of the education concept "zone of proximal development" or ZPD. The ZPD is the set of skills or knowledge a student can't do on her own but can do with the help or guidance of someone else. It's the skill level just above where the student currently is. ZPD is often depicted as a series of concentric circles.

Vygotsky Scaffolding: What It Is and How to Use It

Vygotsky's famous definition of zone of proximal development states that the ZPD is "the distance between the actual developmental level as determined by independent problem solving and the level of potential development as determined through problem solving under adult guidance, or in collaboration with more capable peers." (Vygotsky, p. 86, 1978).
